Conclusions

01

Introduction

Task problem

Task problem: Cloth folding

Infinite types of cloth.

With visual observations the robot has to recognise and fold the cloth.

02

Cloth simulation

2.1 Model

2.2 Timeline

Cloth simulation: Mass-Spring model

Structural

$[i, j] - [i, j + 1]; [i, j] - [i + 1, j]$

Shear

$[i, j] - [i + 1, j + 1]; [i + 1, j] - [i, j + 1]$

Bend

$[i, j] - [i, j + 2]; [i, j] - [i + 2, j]$

Cloth simulation in four steps

External and Internal forces

Elastic force

Viscous force

Gravity force

Wind force

Verlet Integrator

Fast

Position based

$$x(t + \Delta t) = 2x(t) - x(t - \Delta t) + a(t)\Delta t^2$$

Correction

Interpenetration

Friction

Impact

Superelasticity

Fix unrealistic behavior

03

CURL

Contrastive Unsupervised
Representation for
Reinforcement Learning

CURL: Contrastive Unsupervised Representations for Reinforcement Learning

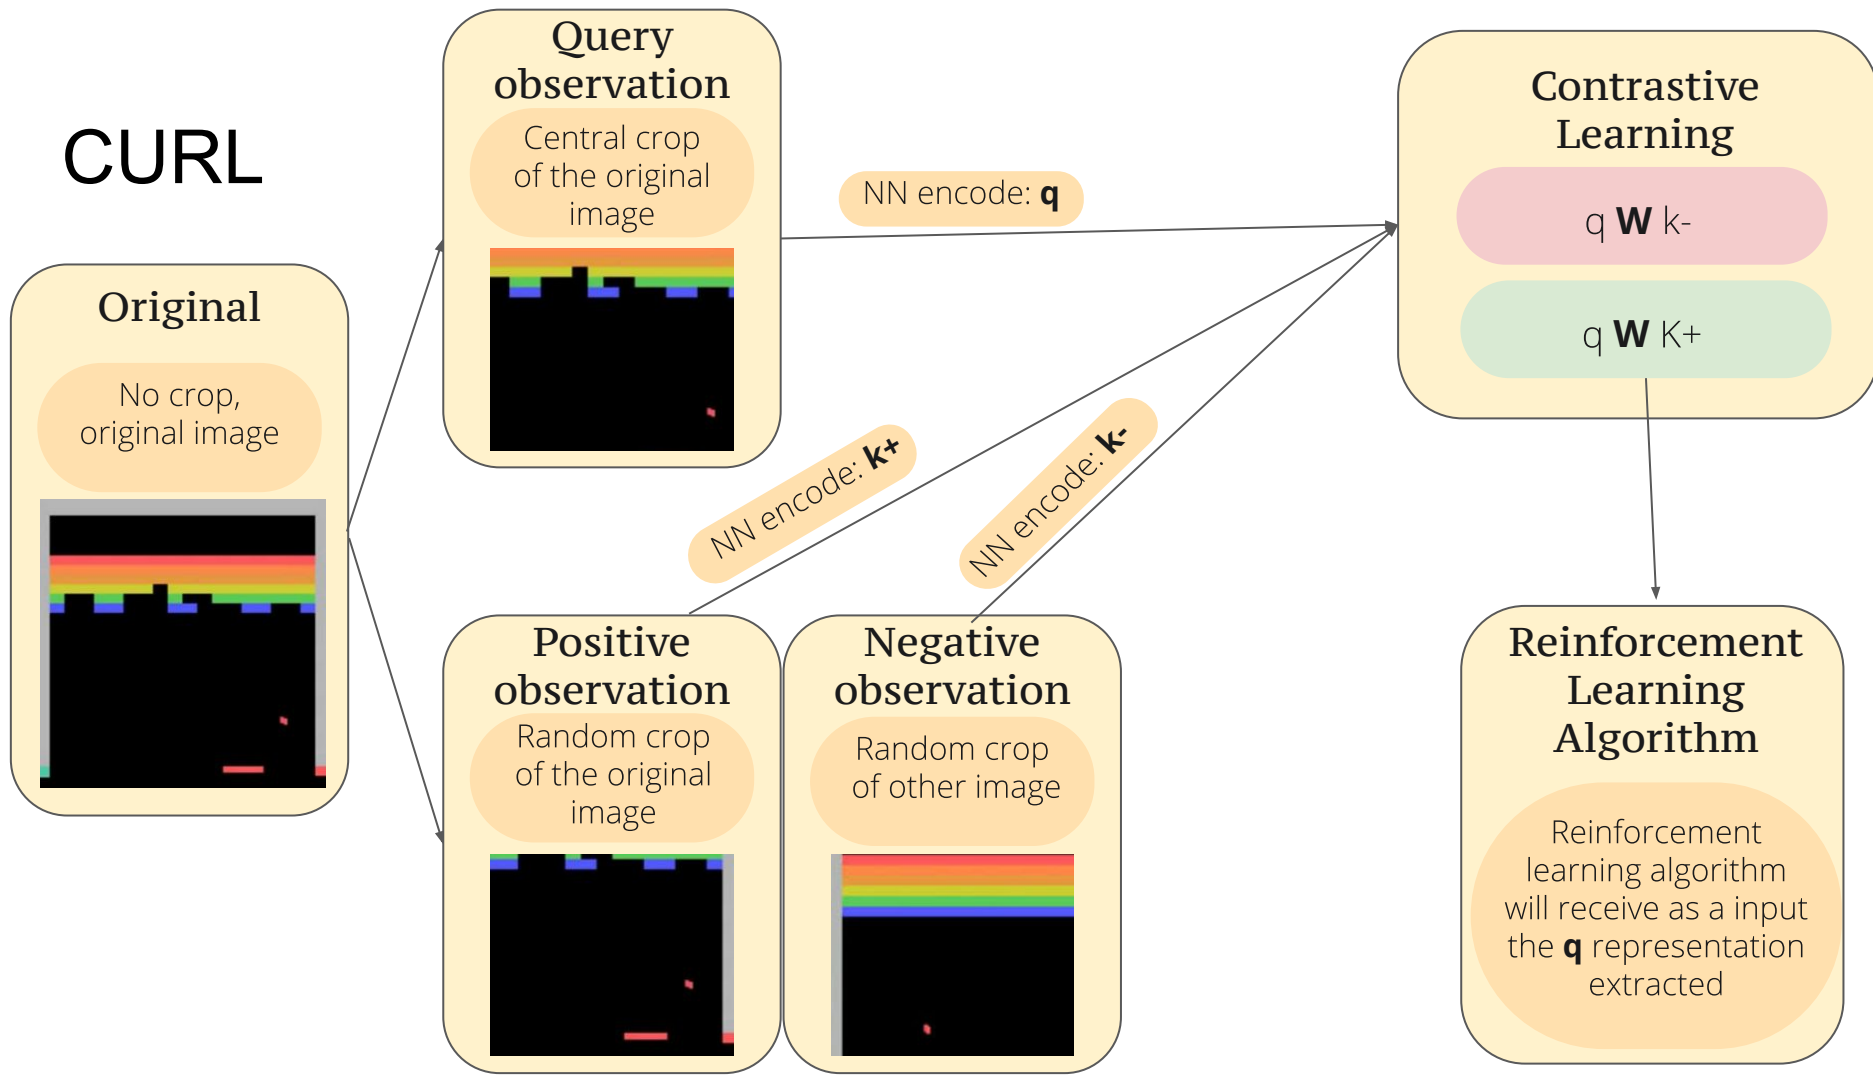

Problem

Reinforcement learning from high dimensional observations such as raw pixels is inefficient.

Solution

CURL: Extract information from the images to help the RL algorithm.

CURL

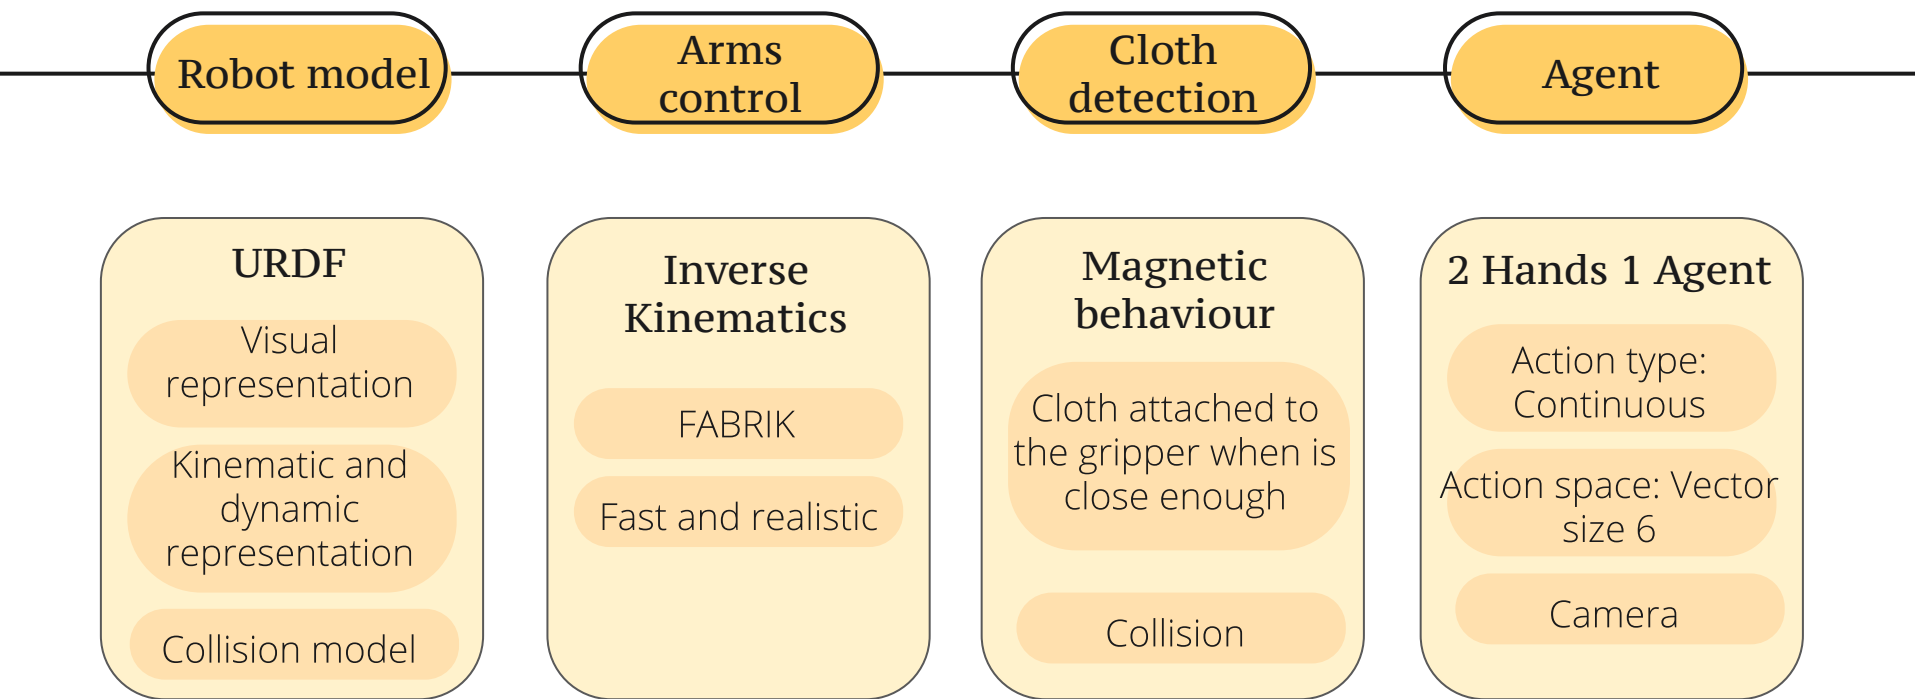

04

Robot simulation

- 4.1 Simulation environment
- 4.2 Folding task
- 4.3 Reward function
- 4.4 Experimental framework

Robot simulation: Simulation environment

Folding task

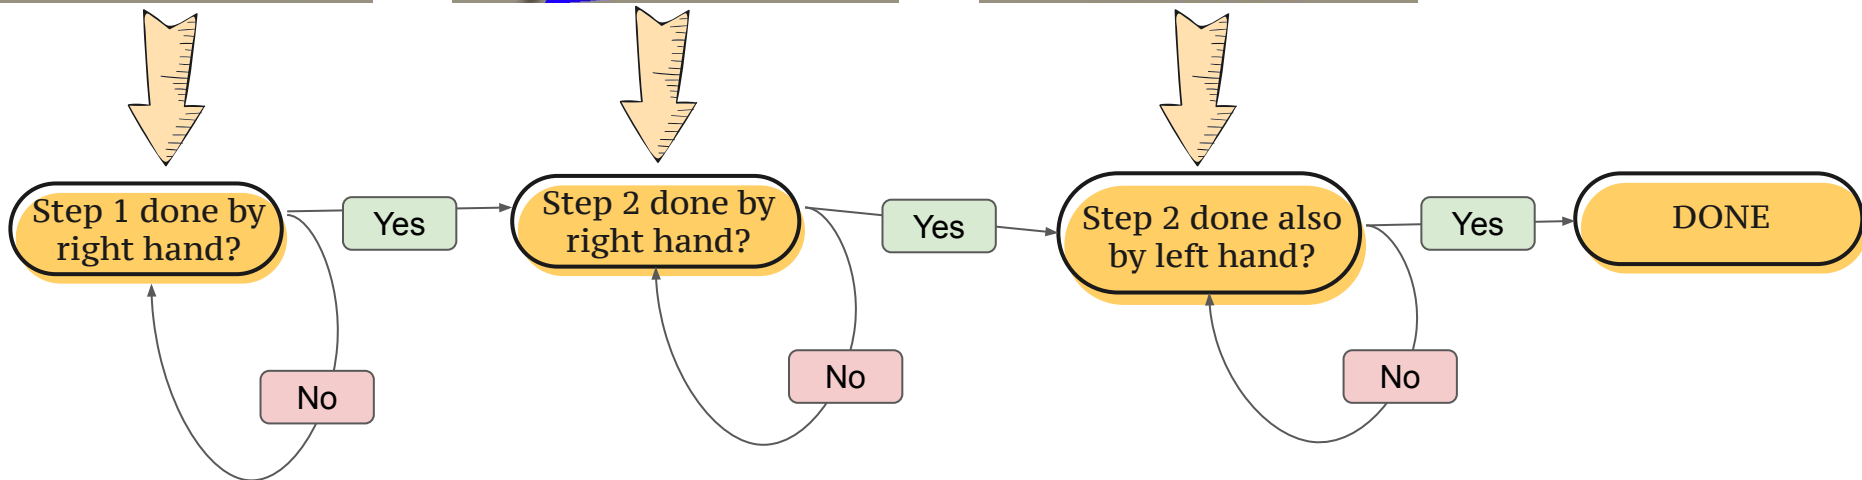

First step

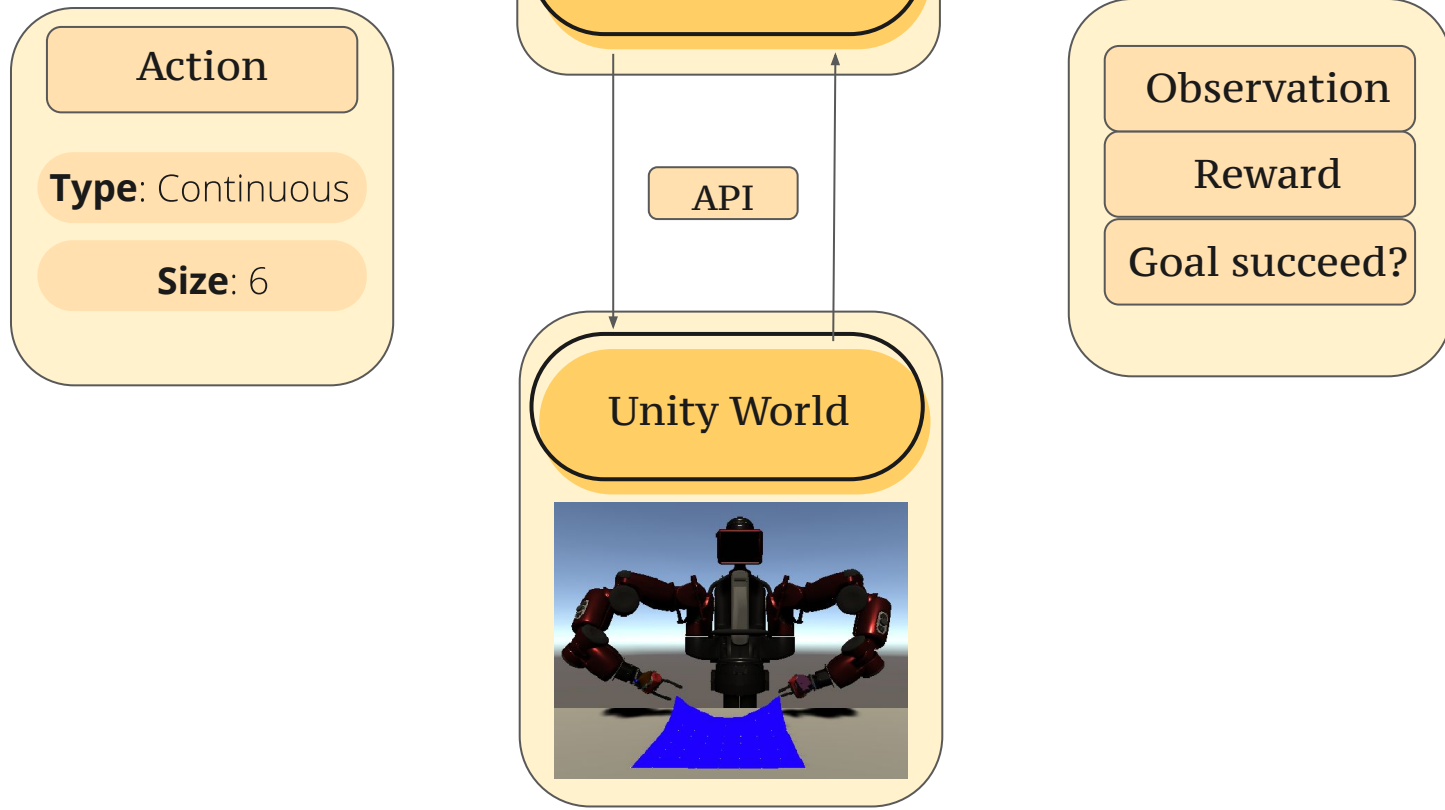

Second step

Reward function

Experimental setup

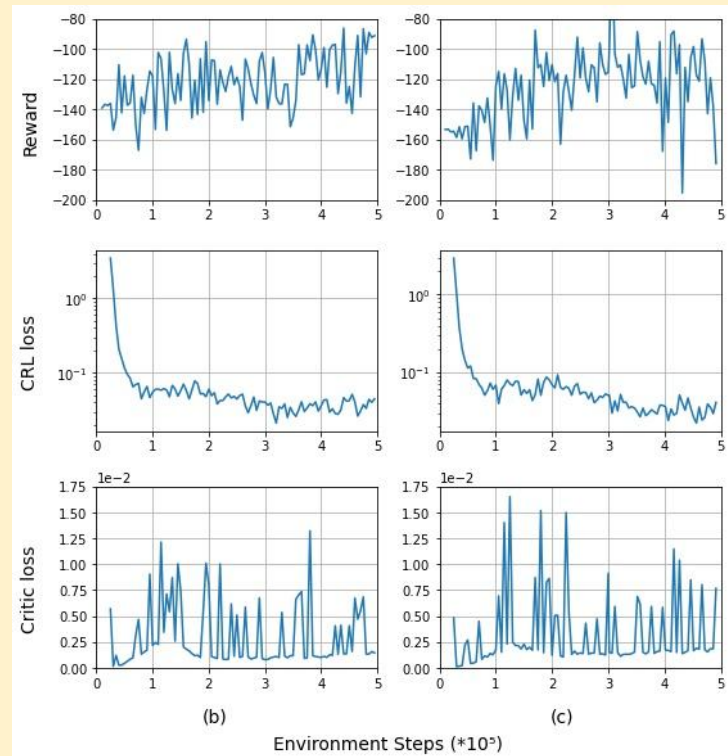

05

Results

5.1 Results

Results

06

Conclusions

Conclusions

Increase the dimension of the observations

Cloth simulation problems

$$\vec{F}_{ij}^e = k_{ij}(\|\vec{r}_{ij}\| - l_{ij}) \frac{\vec{r}_{ij}}{\|\vec{r}_{ij}\|}$$

$$\vec{F}_{ij}^d = d_{ij}(\vec{v}_i - \vec{v}_j)$$

Conclusions

Different simulation time step
